PROGRAMMING LANGUAGES

Programming

- MySQL *Not my favorite, but It will do*
- MongoDB *Now that's what I'm talking about*
- JavaScript *The reason why I code today*
- React/Redux *It is a Framework? Is it a Library? Whatever it is, its my favorite*
- jQuery *A fun Library to use*
- NodeJS *npm install –save-dev react react-dom react-router-dom it never ends*
- Angular *I've built a few forms using Angular 5, I'm impressed and would love to learn more*
- Webpack *test: /\.skills?\$/ use: {loader: "style-loader"} – you betcha*
- Gulp *haven't really had to use gulp, but I've got the basics down*
- AWS *I've built a couple of EC2 instances, I'm not the greatest, but I know my way around*

Designing

- HTML *A webpage wouldn't exist without this....*
- CSS *If only there weren't so many screen sizes out there*
- Bootstrap *Fun, quick and easy way to style your pages*
- Less *I know what we need... Lets add Math to your styling*
- Sass *I know its not JavaScript, but it can do so much more*
- FlexBox *Not my strongest skill, but I'm working on it.*

EDUCATION

California State Dominguez Hills -

B.A. Digital Media and Arts: Audio Recording, June 2017

Origin Code Academy

Certification of Completion, May 2018

San Diego Community College City/Mesa College

A.A. Visual Performing Arts: Digital Music Technology, June 2015

A.A Liberal Arts & Science Business Studies

Studio West

Pro Tools 8 Certification, May 2010

SKILLS

- Office 365: Word, Excel, Power Point *If only they went back to perpetual licenses*
- PhotoShop, Premiere Pro, Illustrator, After Effects *I have a good understanding of what all of these programs can do and what they are used for*
- Avid Pro Tools *My whole professional audio career revolved around pro tools*
- Final Cut Pro *I stopped using Final Cut Pro when they changed it from 7 to X*
- Jira *I'm not a scrum master, but I can sure knock out tickets*
- Git Flow *Branches is the best way for version control*

PROJECTS

My Life Unlocked

<http://mylifeunlocked.com>

This is a website that was built using wordpress.com. All of the media was created by the owner, and I was given the authority to edit, compress and finalize all of the media. Integrated plug-ins, such as Member Press was an eye opener for me due to the fact that the plug-in required a specific format within the Wordpress template. All of the original images were too large for site and slowing down its initial loading. I used imageOptim to compress the size each image in order to boost its page load required for SEO specification. The page also needed basic styling which was added through the website.

The Barberos BarberShop

<https://www.thebarberosbarbershop.com>

This website is built in React using Sass for design. I created all of the media aside from the basic logo, I used PhotoShop, Illustrator and Premiere to create media for the businesses Social Media and Website. All of the custom elements were created in Illustrator such as the navigation bar and icons. The website is hosted on an EC2 instance in AWS using a Node.JS backend that allows for further customization.

1618 – Crypto Currency

This is a Crypto Currency that was built from scratch during JS meetups at 1618 held at 7 CTOs. This currency was created using JavaScript during a course of 6 Mob Programming sessions. I personally built the UI using React/Redux Framework because the project incorporated a user profile that needed to access an account that could then be manipulated over the course of a session. Although Redux will soon be phased out from Facebook's support, I understand how it works into detail and felt it would be a good tool to use.

Personal Portfolio

<https://www.alfonsowong.com>

This website is built in React using the LESS pre processor for design. All of the media was created in Photoshop, Illustrator and Premiere. I used Redux for all of the different forms that are included in the projects section and MongoDB for a route that will enable a user to sign up and adjust items on a specific portfolio. This Website is hosted on an EC2 instance with a NodeJS backend that includes Mongoose. I also integrated Google analytics to track the viewers of my portfolio.
